

RESOLVE NOW :-

Your Platform For Online Complaints

Team ID : **LTVIP2025TMID58213**

Team Size : 4

Team Leader : Chinta Siva Janardhan

Team member : B Meghana

Team member : D Naveen

Team member : Gunturu Mydhi li

PROJECT STRUCTURE :

- Introduction
- Problem Statement
- Objectives
- Literature Review / Market Analysis
- System Design
- Implementation
- Testing & Results
- Conclusion & Future Work
- References

DEFINE PROJECT SCOPE

- **objectives:**
- *Are you building a new platform, analyzing an existing one, or proposing improvements?*
- *Who is your target audience (consumers, businesses, government)?*
- *What types of complaints will your platform handle (consumer products, services, civic issues, etc.)?*
-

RESEARCH EXISTING PLATFORMS :-

- **Study platforms like:**

- *Consumer Complaints (consumercomplaints.in)*
- *National Consumer Helpline (govt. Of India)*
- *Better Business Bureau (bbb.org)*
- *Online forums (Reddit, Quora)*

- **Analyze:**

- *Features offered (complaint submission, tracking, resolution, feedback)*
- *User interface and experience*
- *Success stories and pain points*

PLAN PLATFORM FEATURES :-

- **Key features :**
- **User Registration/Login:** Secure sign-up and authentication
- **Complaint Submission:** Easy-to-use form for details, attachments
- **Tracking System:** Users can check status updates
- **Communication:** Messaging between complainant and resolver
- **Resolution Workflow:** Steps from submission to closure
- **Feedback/Rating System:** Users rate the resolution process
- **Admin Dashboard:** For moderation and analytics

DESIGN WIREFRAMES OR PROTOTYPES :-

- *Use tools like Figma, Adobe XD, or pen-and-paper sketches*
- *Map out user journeys (from registration to complaint resolution)*
- *Get feedback from peers or mentors*

DEVELOP OR SIMULATE THE PLATFORM :-

- **If building:**
 - *Choose a tech stack (e.g., React for frontend, Node.js for backend, MongoDB for database)*
 - *Implement core modules (user, complaints, admin)*
 - *Test for usability and bugs*
- **If simulating:**
 - *Create flowcharts or mockups*
 - *Prepare sample data and demonstrate workflows*

DOCUMENT THE PROCESS :-

- **Write a report or presentation covering:**
- *Project objectives*
- *Market research findings*
- *Feature list and rationale*
- *Design decisions*
- *Implementation steps*
- *Challenges faced and solutions*
- *Future enhancements*

DEMONSTRATE AND GET FEEDBACK :-

- Prepare a demo (live or recorded)
- Gather feedback from users, mentors, or evaluators
- Note suggestions for improvement

FINALIZE AND SUBMIT :-

- Polish your documentation and presentation
- Ensure your platform or prototype is accessible
- Submit as per your project guidelines

A close-up photograph of a computer keyboard. The central focus is a single, light-colored key with rounded corners, which has the words "Thank You" printed on it in a dark, serif typeface. The key is slightly raised from the keyboard's surface. Surrounding this key are other keys, including one with a forward slash and a vertical line, and another with a backslash and a vertical line. The lighting is soft, creating subtle shadows and highlighting the texture of the keys and the keyboard's frame.

Thank You
